# Practical 1

Aim: Write a program to create a robot with gear and move it forward, left, right.

a. withGear.java

```java
package practical_1;

import ch.aplu.robotsim.*;

public class withGear {
    withGear(){
        NxtRobot robot = new NxtRobot();
        Gear g = new Gear();
        robot.addPart(g);
        g.setSpeed(100);
        g.forward(800);
        g.left(270);
        g.forward(800);
        g.right(270);
        g.forward(500);
    }
    public static void main (String[] args) {
        withGear robo = new withGear();
    }
}
```
Output:

b. withoutGear.java

```java
package practical_1;

import ch.aplu.robotsim.*;

public class withoutGear {
    withoutGear(){
        TurtleRobot robot = new TurtleRobot();
        robot.forward(200);
        robot.left(90);
        robot.forward(200);
        robot.left(90);
        robot.forward(200);
    }
```

```
    public static void main (String[] args) {
        withoutGear robo = new withoutGear();
          }
}
```

<u>Output:</u>

Practical 2

Aim: Write a program to create a robot with 2 motors and move it forward, left, right.

twoMotorsMovement.java
```java
package practical_2;

import ch.aplu.robotsim.*;

public class twoMotorsMovement {
    twoMotorsMovement(){
        NxtRobot r = new NxtRobot();
        Motor m1 = new Motor(MotorPort.A);
        Motor m2 = new Motor(MotorPort.B);
        r.addPart(m1);
        r.addPart(m2);

        m1.forward();
        Tools.delay(1090);
        m2.forward();

        Tools.delay(1090);
        m1.stop();

        m2.forward();
        Tools.delay(1090);
        m1.forward();

        m1.stop();
        m2.stop();
    }
    public static void main(String args[]){
        new twoMotorsMovement();
    }
}
```
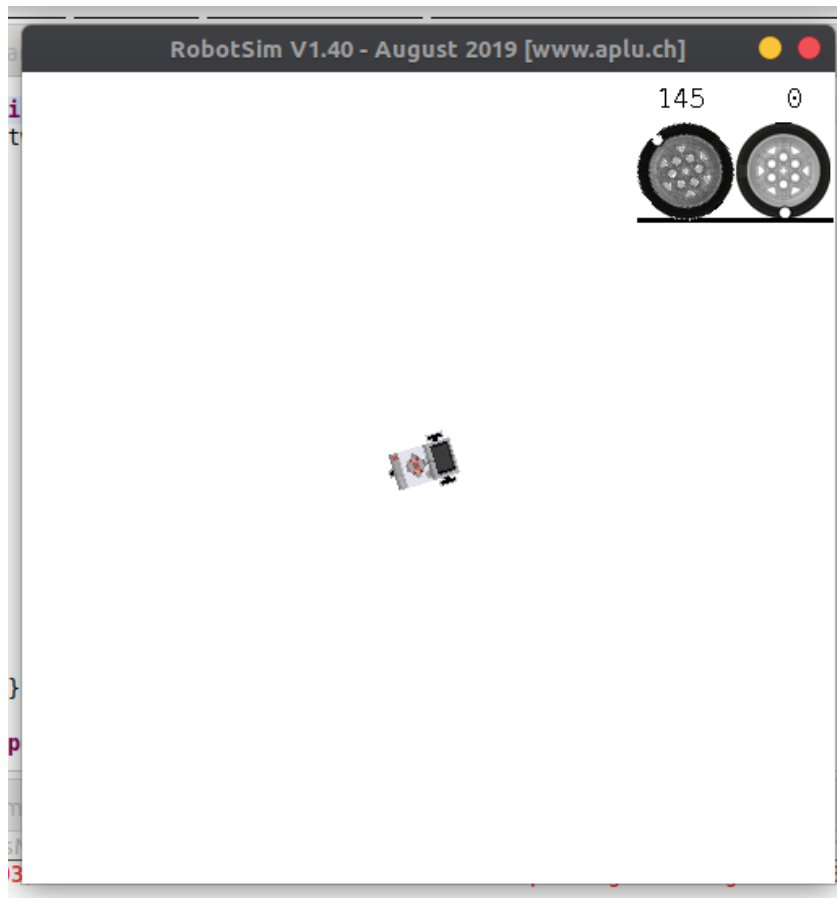

Output:

Practical 3

Aim:WRITE A PROGRAM TO DO A SQUARE USING A WHILE LOOP.
square.java

```java
package practical_3;

import ch.aplu.robotsim.*;

public class square{
    square(){
        NxtRobot robot = new NxtRobot();
        Gear g = new Gear();
        robot.addPart(g);
        g.setSpeed(100);
        while(true) {
            g.forward(1000);
            g.left(270);
        }
    }
    public static void main(String[] args) {
        square robo = new square();
    }
}
```

Output :

Practical 4

Aim: Write a program to create a robot with light sensors to follow a line.

lightSensor.java

```java
package practical_4;

import ch.aplu.robotsim.*;

public class lightSensor {
    static {
        RobotContext.setStartPosition(32,495);
        RobotContext.useBackground("sprites/road.gif");
    }

    lightSensor(){
        LegoRobot robot = new LegoRobot();
        Gear g = new Gear();
        LightSensor ls = new LightSensor(SensorPort.S3);
        robot.addPart(g);
        robot.addPart(ls);
        g.forward();
        g.setSpeed(50);

        while(true){
          int v =ls.getValue();
          if(v < 100)
              g.forward();
          if(v > 350 && v<750)
              g.leftArc(0.005);
          if(v > 800)
              g.rightArc(0.005);
        }
    }
```

```
public static void main(String[] args) {
        lightSensor robo = new lightSensor();
    }
}
```

Output :

Practical 5

Aim: Write a program to create a robot that does a circle using 2 motors.

twoMotorsCircle.java

```java
package practical_5;

import ch.aplu.robotsim.*;

public class twoMotorsCircle {
    twoMotorsCircle(){
        NxtRobot robot = new NxtRobot();
        Motor A = new Motor(MotorPort.A);
        Motor B = new Motor(MotorPort.B);
        robot.addPart(A);
        robot.addPart(B);

        A.setSpeed(100);
        B.setSpeed(100);
        A.forward();
        B.forward();

        while(true) {
            Tools.delay(500);
            A.stop();
            Tools.delay(500);
            A.forward();
        }

    }
    public static void main(String[] args) {
        twoMotorsCircle robo = new twoMotorsCircle();
    }
}
```
Output :

Practical 6

Aim: Write a program to create a path following robot.

pathFollowig.java

```java
package practical_6;

import ch.aplu.robotsim.*;
public class pathFinding {
    pathFinding(){
        NxtRobot robot=new NxtRobot();
        Gear gear=new Gear();
        LightSensor ls1=new LightSensor(SensorPort.S1);
        LightSensor ls2=new LightSensor(SensorPort.S2);
        robot.addPart(gear);
        robot.addPart(ls1);
        robot.addPart(ls2);
        gear.forward();
        gear.setSpeed(100);

        while(true) {
         int rightValue=ls1.getValue();
         int leftValue=ls2.getValue();
         if(leftValue < 10)
             gear.rightArc(0.05);
         if(rightValue < 10)
             gear.leftArc(0.05);
         if(leftValue > 10 && rightValue > 10)
             gear.forward();
        }

    }
```

```
public static void main(String[] args) {
        pathFinding robot = new pathFinding();
    }

    static {
       NxtContext.setStartPosition(267,232);
       NxtContext.setStartDirection(-90);
       NxtContext.useBackground("sprites/path.gif");
    }
}
```

Output :
Practical 7

Aim: Write a program to resist obstacles.

resistObstacle.java

```java
package practical_7;

import ch.aplu.robotsim.*;

public class resistObstacle {
    resistObstacle(){
        LegoRobot r=new LegoRobot();
        Gear g = new Gear();
        TouchSensor t1= new TouchSensor(SensorPort.S1);
        TouchSensor t2 = new TouchSensor(SensorPort.S2);
        r.addPart(g);
        r.addPart(t1);
        r.addPart(t2);
        g.forward();
        g.setSpeed(50);

        while(true){
            Boolean b1 = t1.isPressed();
            Boolean b2 = t2.isPressed();
            if(b1 && b2){
                g.backward(150);
                g.right(400);
                g.forward();
            }
            if(b1){
                g.backward(150);
                g.left(200);
                g.forward();
            }
```

```
            if(b2){
                g.backward(150);
                g.right(200);
                g.forward();
            }
        }
    }
    static {
        RobotContext.setStartPosition(100,250);
        RobotContext.useObstacle(RobotContext.channel);
    }
    public static void main(String[] args) {
     resistObstacle robo = new resistObstacle();
    }
}
```
